Fermentation technology

Biopeptides

***Trade Name**

Biopeptide Mn [INCI Name : Saccharomyces (and) **Manganese** Ferment]
Biopeptide Zn [INCI Name : Saccharomyces (and) **Zinc** Ferment]
Biopeptide Ca [INCI Name : Saccharomyces (and) **Calcium** Ferment]
Biopeptide Cu [INCI Name : Saccharomyces (and) **Copper** Ferment]

Biopeptide Mn (Manganese)

Anti-inflammation & Moisturizing

Manganese?

- Manganese is a micronutrient that you don't hear much about, but manganese has antioxidants, free-radical-fighting properties. (Antioxidants helps to cure inflammation)
- Manganese also helps the body absorb vitamin B1 (thiamin) and Vitamin E.

Appearance	Colorless liquid
Odor	Characteristic odor
Mn content	50~100ppm
Solubility	Water soluble
Dosage	1 ~ 10 %

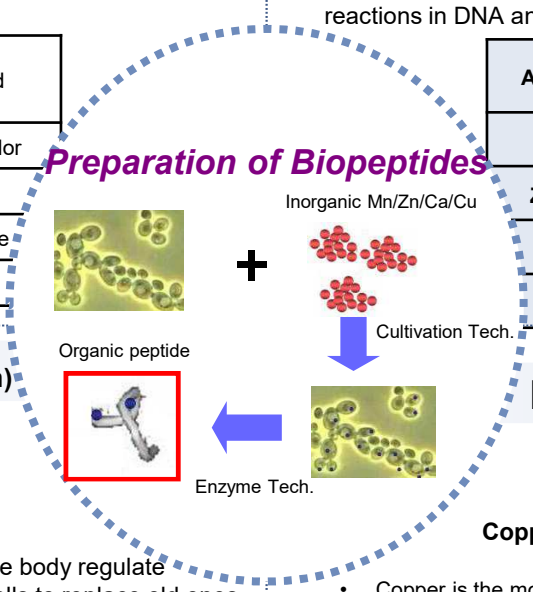

Biopeptide Zn (Zinc)

Anti-wrinkle, Moisturizing & Skin Protection

Zinc?

- The mineral zinc is present in every part of the human body, and the 5% of the total is in skin. Zinc is a potent antioxidant, essential to detoxification and to make a healthy skin.
- Zinc induces metallothionein, an essential cellular antioxidant, which is a part of the cell's natural defense system. Zinc also plays an important role in the turn-over of the dermis, including a critical role in the healing process. It acts as a cofactor to many enzymatic reactions in DNA and RNA synthesis of cells.

Appearance	Colorless liquid
Odor	Characteristic odor
Zn content	50~100ppm
Solubility	Water soluble
Dosage	1 ~ 10 %

Biopeptide Ca (Calcium)

Skin Regeneration & Skin Protection

Calcium?

- Calcium in the epidermis helps the body regulate
- how fast it generates new skin cells to replace old ones and how quickly it sheds old skin cells.
- Skin that does not have enough calcium stored in the epidermis may appear fragile, thin and dry. The appearance is caused by the lack of calcium to spur new skin growth or to let go of dead skin cells.

Appearance	Colorless liquid
Odor	Characteristic odor
Ca content	50~100ppm
Solubility	Water soluble
Dosage	1 ~ 10 %

Biopeptide Cu (Copper)

Anti-wrinkle & Moisturizing
Hair loss protection

Copper?

- Copper is the most important micronutrients for the repair of the human tissue.
- It is also a cofactor of many enzymes, including cytochrome C oxidase (necessary for the energy production), superoxide dismutase (provides antioxidant protection) and lysyloxidase (promotes the cross-linkage of elastin and collagen in skin).

Appearance	Light blue liquid
Odor	Characteristic odor
Cu content	50~100ppm
Solubility	Water soluble
Dosage	1 ~ 10 %
