Anti-microbial effect

Chlorphenesin

*Trade Name : Macrocide OL

INCI Name : Chlorphenesin
CAS No. : 104-29-0

Chlorphenesin (C9H11ClO3, MW 202.64)

Introduction

Chlorphenesin is a type of preservative and antimicrobial substance. It is active against bacteria, fungi and yeasts. It is one of the newest preservative agents to make an appearance in the personal care industry. It has been widely used in the pharmaceutical industry for many years.

Characteristics of Chlorphenesin

- Odorless and white crystal powder
- The suitable pH is between 3 - 9.
- When Chlorphenesin is combined with other preservatives, overall preserving performance gets boosted. It creates synergy with other preservation components by providing broad spectrum defense against bacterial and fungal proliferation.
- Suitable for microbiological preservation of cosmetics, including emulsions (creams, lotions), masks, gels, aqueous or alcoholic solutes, spray, sticks, serums, tonics, makeup products (eyeliner, mascaras etc.), shampoos, conditioner, foams.

Solubility of Macrocide-OL

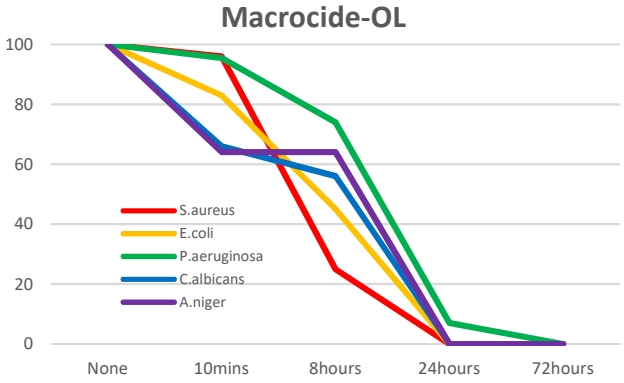

Solvent	Solubility
De-ionized water	soluble below 1%
100% ethanol	soluble
50% ethanol	soluble
Butylene glycol	soluble
Propylene glycol	soluble
Glycerol	soluble
Silicone oil	insoluble
Olive oil	insoluble
Surfactant (Sodium Laureth Sulfate)	soluble below 1%

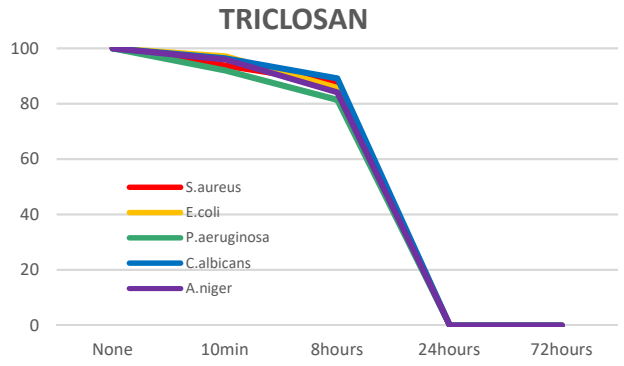

Specification

Appearance	White to pale yellow crystal
Odor	Almost odorless
Solubility	Water <10g/l>
Identification	IR Spectrum
Assay	Min. 99.0%
pH(1->100)	6.0 ~ 8.0
Loss on drying	Max. 1.0%
Residue on ignition	Max. 0.1%
Melting point	78~81° C
Heavy metals	Max. 20ppm
Arsenic	Max. 2ppm
Microbial count	Max. 10^2 cfu/g

Anti-microbial efficacy test

Test :Macrocare

☞ Macrocide-OL has anti-microbial activity for a short time like Triclosan.
